

North Carolina Geodetic Survey

North Carolina Continuous Operating Reference Stations (CORS)

What is a CORS?

- Continuously Operating Reference Station (CORS)
 - A permanent Global Navigation Satellite System (GNSS) receiver, antenna (with a surveyed reference position), and support equipment

What is a CORS?

- Continuously Operating Reference Station (CORS)
 - NC CORS Network
 - Composed of 83 CORS
 - 4 new CORS have been installed
 - Salisbury (NCSA)
 - Roanoke Rapids (NCRR)
 - New Bern (NCNB)
 - Bodie Island (NCBI)
 - 2 new CORS are being installed
 - Collects data 24/7 at 1 second intervals
 - Receiver type
 - 77 GPS+GLONASS
 - 6 GPS

Former Pea Island CORS

Carolina Country magazine source of imagery

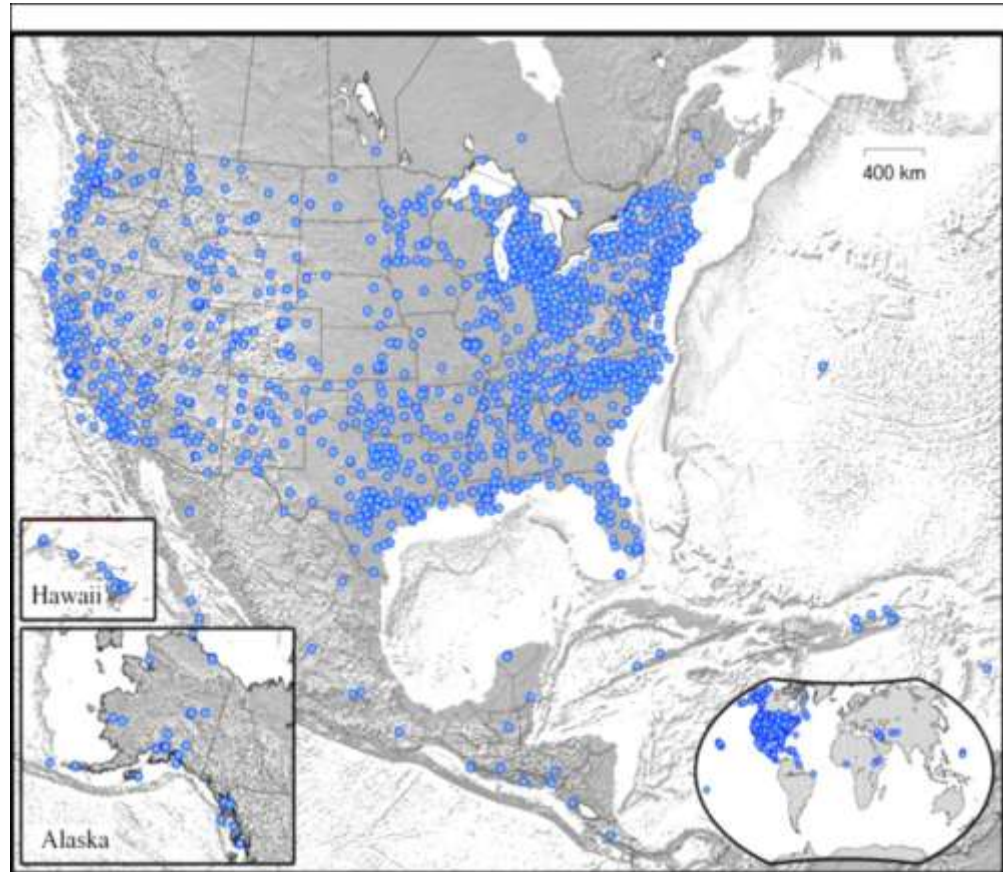

What is a CORS?

- Continuously Operating Reference Station (CORS)
 - CORS in NC that are in the National CORS network but not included in the Real Time Network (RTN)
 - New Bern NDGPS (NBR5 and NBR6)
 - Greensboro NDGPS (NGR5 and NGR6)
 - Plate Boundary Observatory CORS at Rosman (P779)
 - Charlotte (CHME)
 - Conover (CONO)
 - Hillsborough (HILB)

National CORS

- National CORS Benefits
 - Included in OPUS solutions
 - Monitored by NGS (60 day plot)
 - Will be include in any future national adjustments

Operational & Proposed (CORS)

North Carolina Real Time Network (RTN) Upgrade

CORS/RTN Upgrade

- New Servers
 - Three (3) dedicated servers
 - Housed in the western data center
- Software upgrade
 - VRS3-Net
- New features for users
 - Network status
 - Improvements in iono models
 - Access flexibility
- Schedule
 - Servers purchased and installed
 - Software purchased
 - Installation of software has been completed
 - Beta testing completed

CORS/RTN Upgrade

- NCGS operated both systems until to Geoid12 was available
- The new CORS/RTN system will utilize coordinates from the Multi-Year CORS Solution (MYCS)
 - NAD83/2011

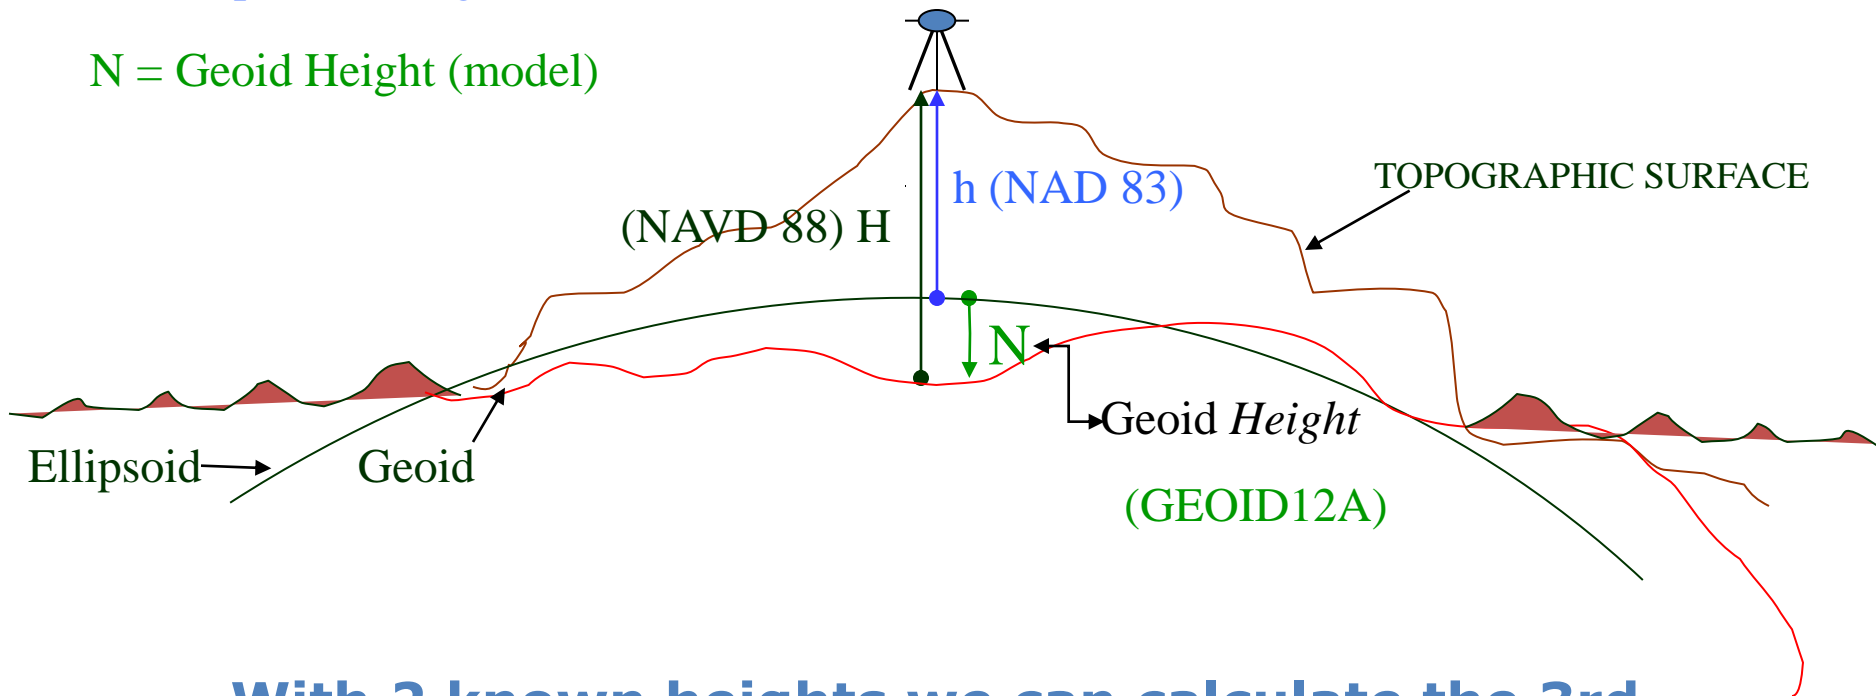

Ellipsoid, Geoid, and Orthometric Heights

H = Orthometric Height (leveling)

h = Ellipsoidal Height (GPS)

N = Geoid Height (model)

$$H = h - N$$

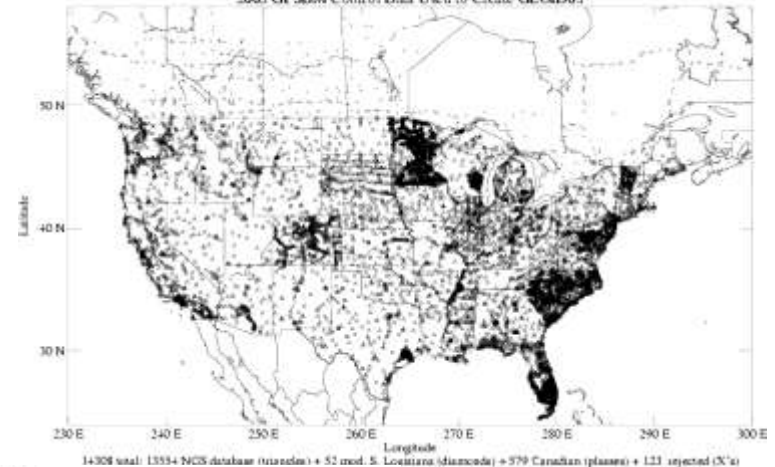

With 2 known heights we can calculate the 3rd

Geoid Model History

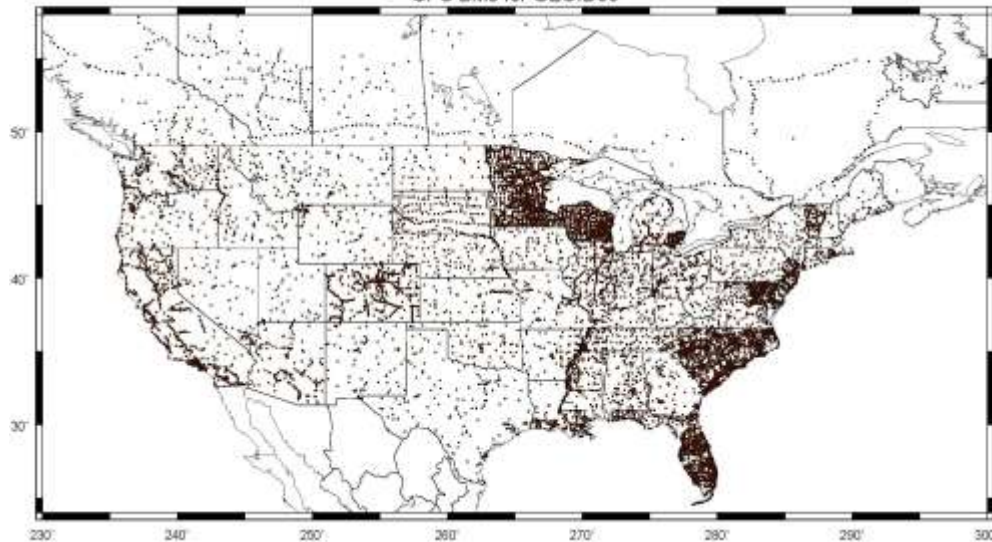

GPS/BMs for GEOID99 (6169 points)

3001 GPSBM Control Data Used to Create GEOID03

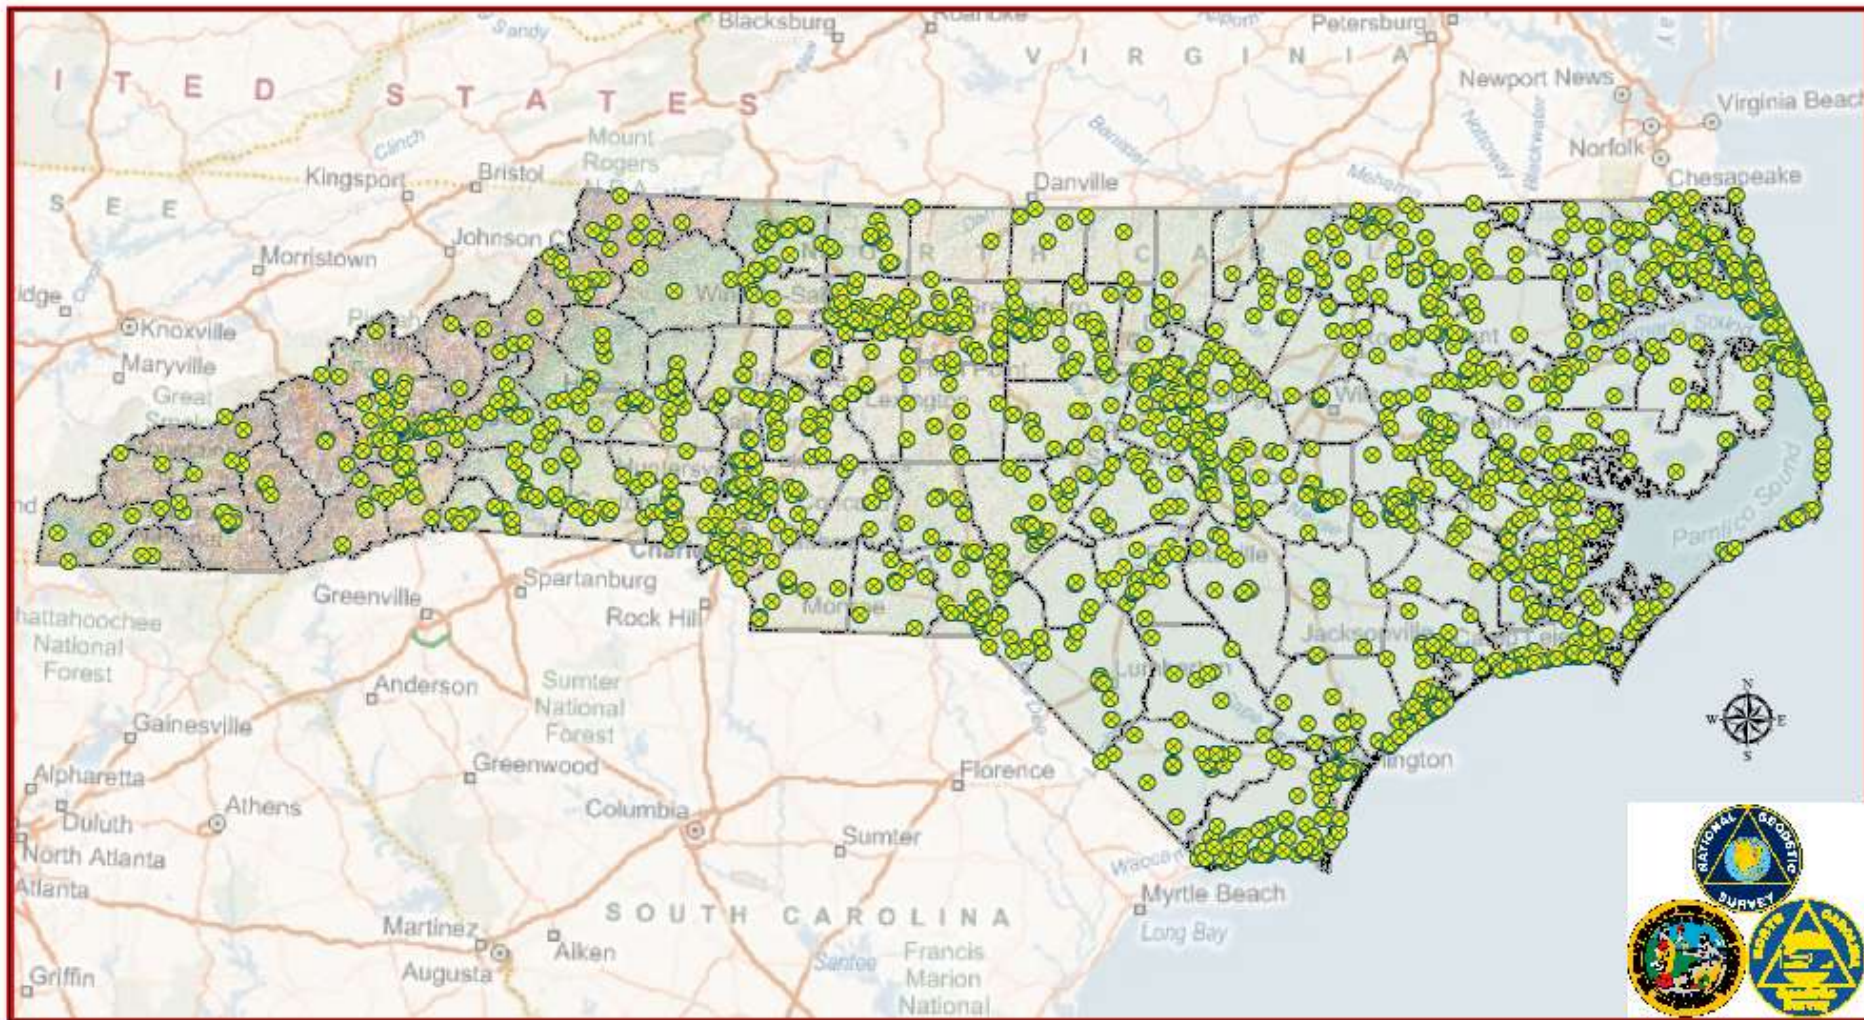

GPS BMs for GEOID09

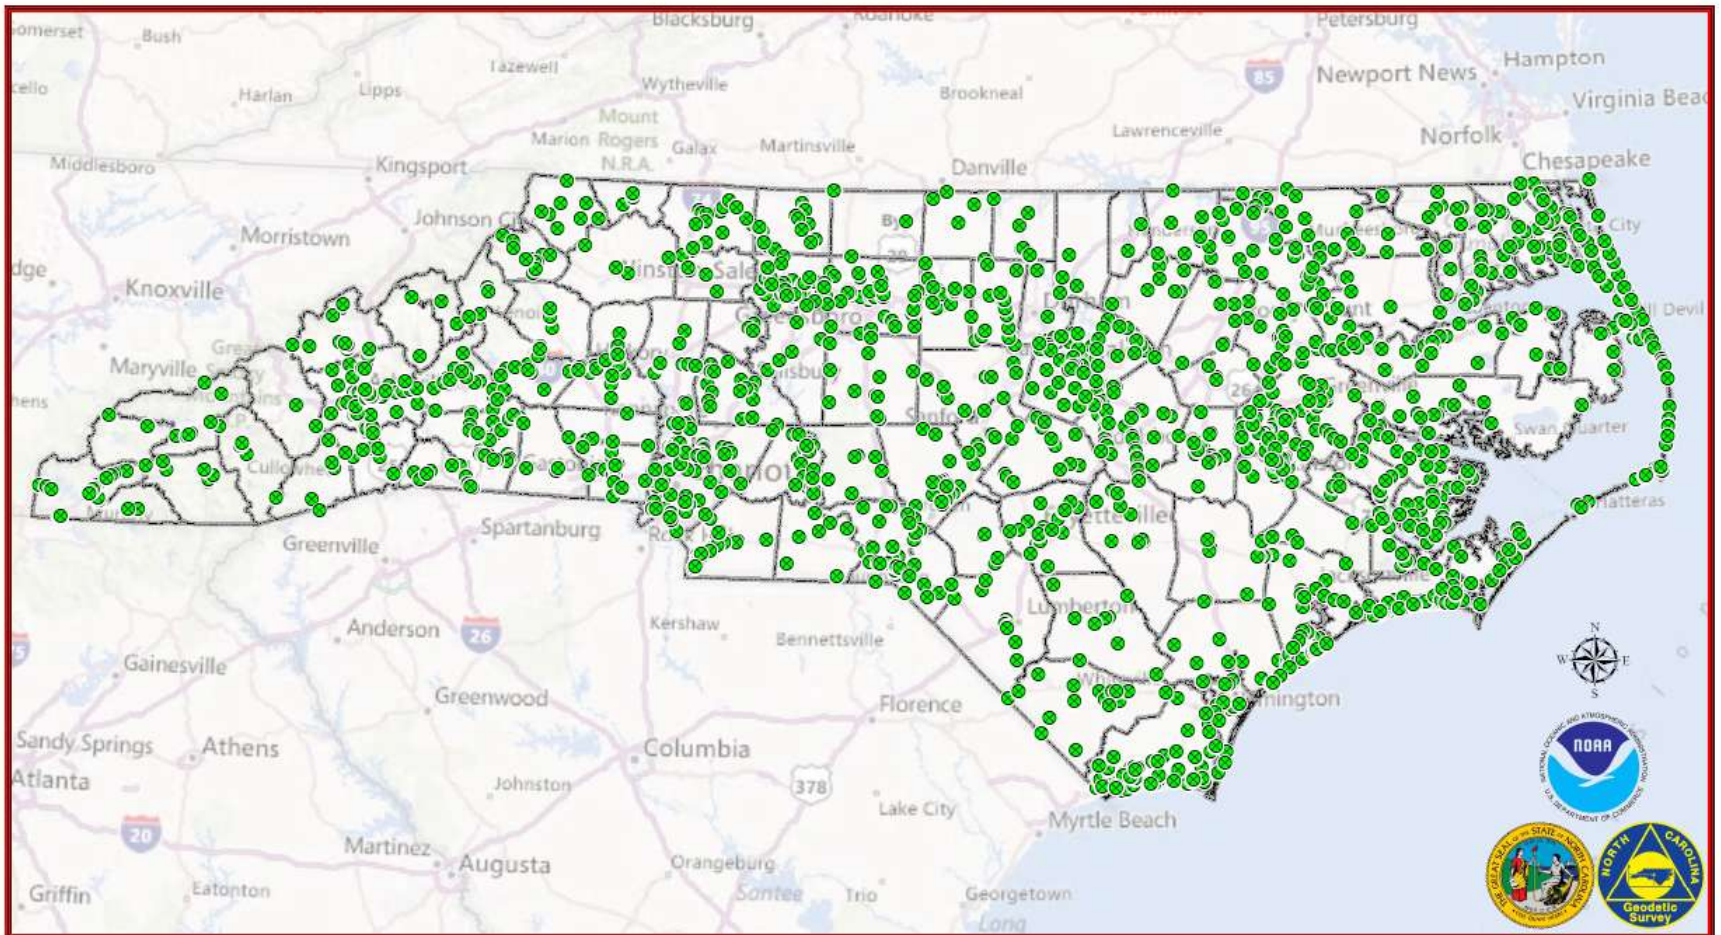

14308 total: 13554 NGS database (triangles) + 52 mod. S. Louisiana (diamonds) + 579 Canadian (pluses) + 121 injected (X's)

Distribution of Control used for the generation of GEOID 09 in North Carolina

Distribution of Control used for the generation of GEOID 12 in North Carolina

RTN Upgrade Notice

The screenshot shows a Windows Internet Explorer browser window displaying the North Carolina Geodetic Survey website. The browser's address bar shows the URL <http://portal.ncdenr.org/web/ncgs/geodetic>. The website header includes the text "Division of Land Resources" and a navigation menu with items: HOME, LAND QUALITY, GEOLOGICAL SURVEY, and GEODETIC SURVEY. A search bar is present with the text "Search DENR".

RTN System Status

April 5, 2012 9:03 AM

The old RTN network (NAD83(HRS2007)) will remain operational and accessible until the NAD83(2011) adjustment and GEOD12 are released. NCGS will post updates on this website.

Please be aware you will still need a new login and password to access the new network.

Contact bart.allgood@ncdenr.gov if you have any questions or concerns.

By Steven Kaufman | 40 Views, 0 Comments | Flag

Message for NC RTN users!

March 30, 2012 1:47 PM

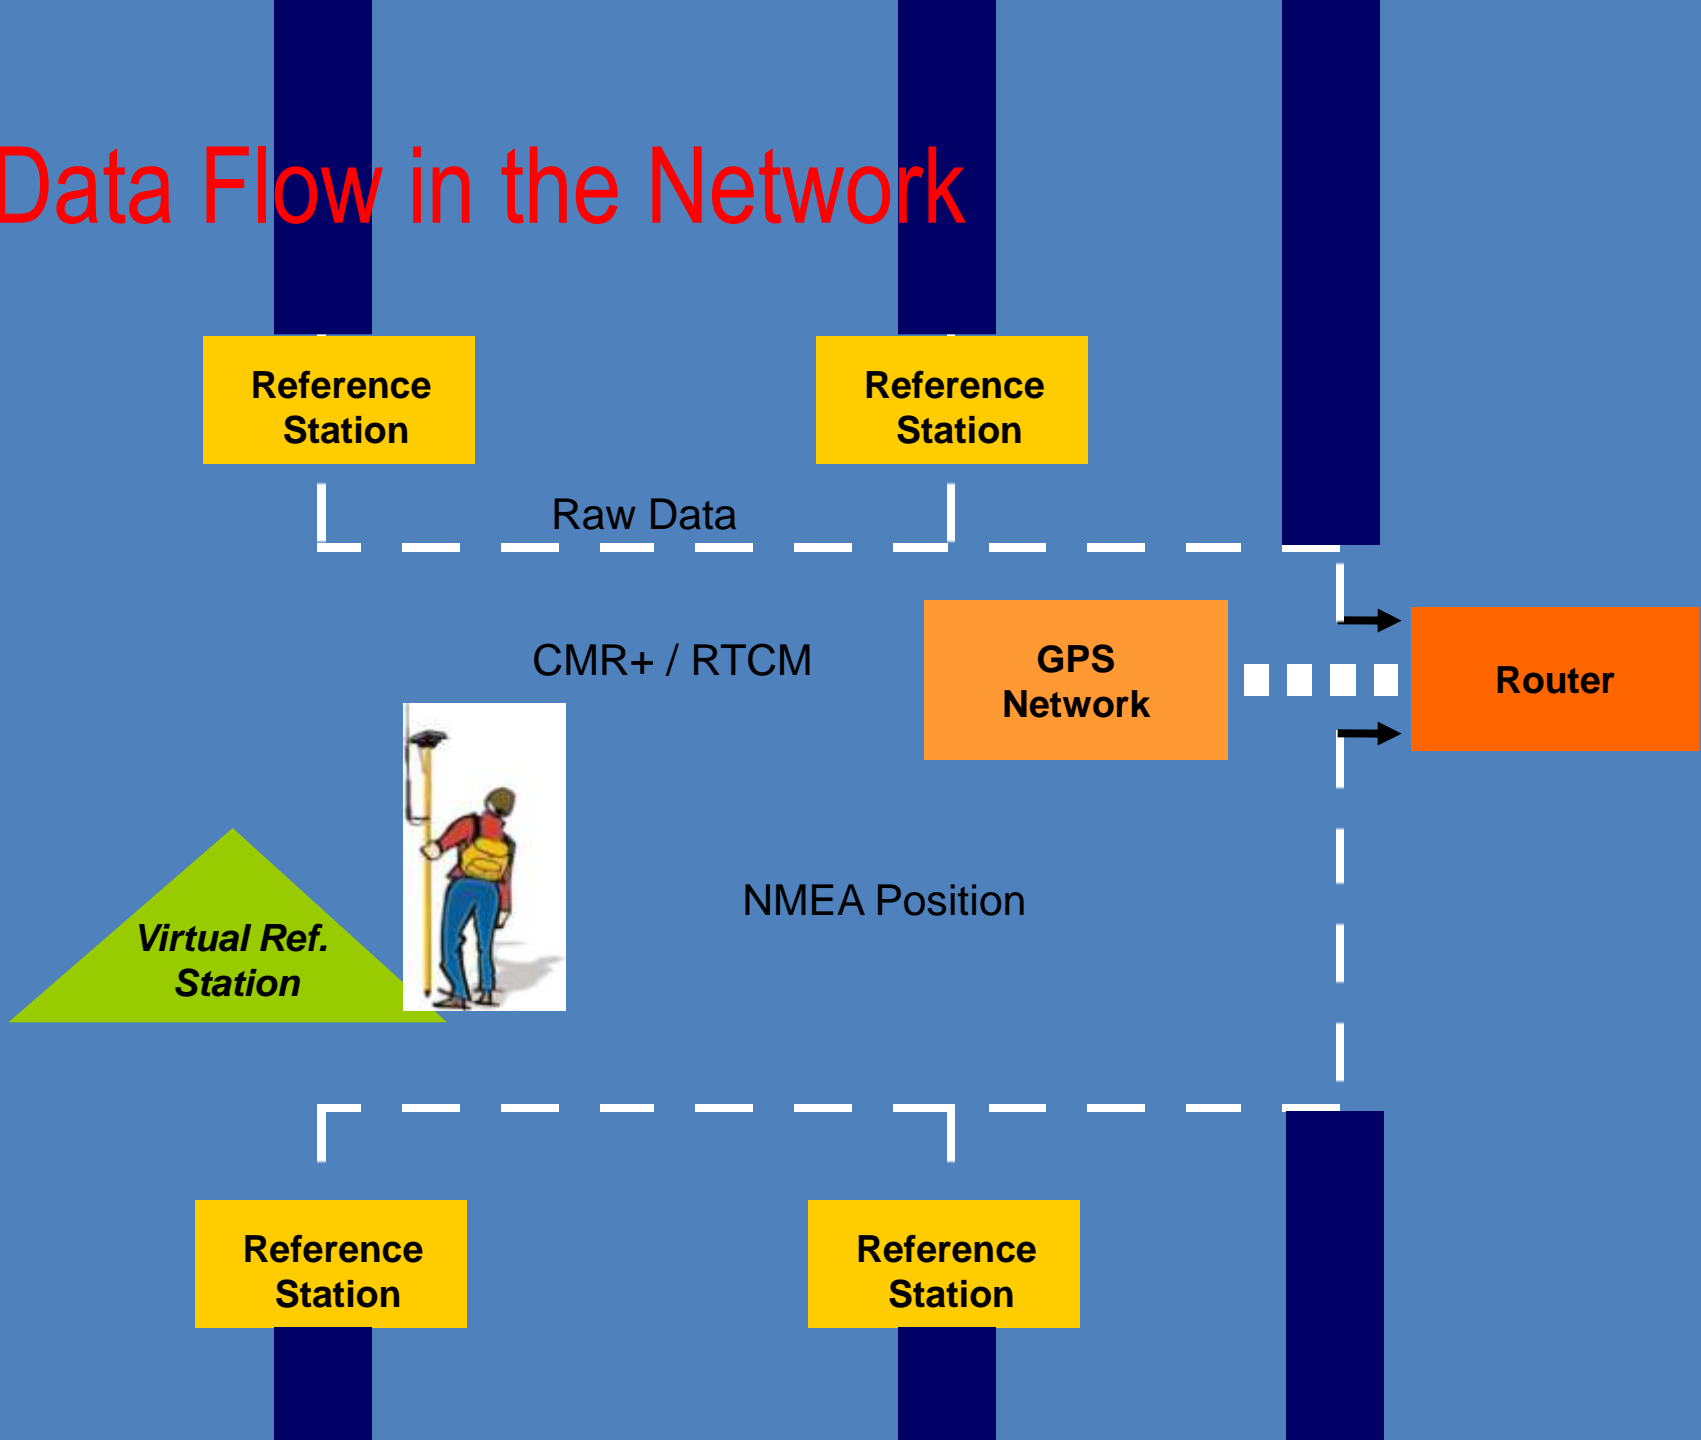

Access to the old RTN (referenced to NAD83(HRS2007)) will end on the evening of April 4, 2012. If users have not received a new RTN access information email, contact Bart Allgood at bart.allgood@ncdenr.gov for further directions.

The new RTN system will be referenced to the most recent National Geodetic Survey (NGS) adjustment of NAD 83, NAD 83(2011) (http://www.ngs.noaa.gov/web/surveys/NA2011/NA2011_Project.shtml), which is aligned with the recently published multi-year CORS solution (www.ngs.noaa.gov/CORS/coord_info/myear_FAQ.shtml).

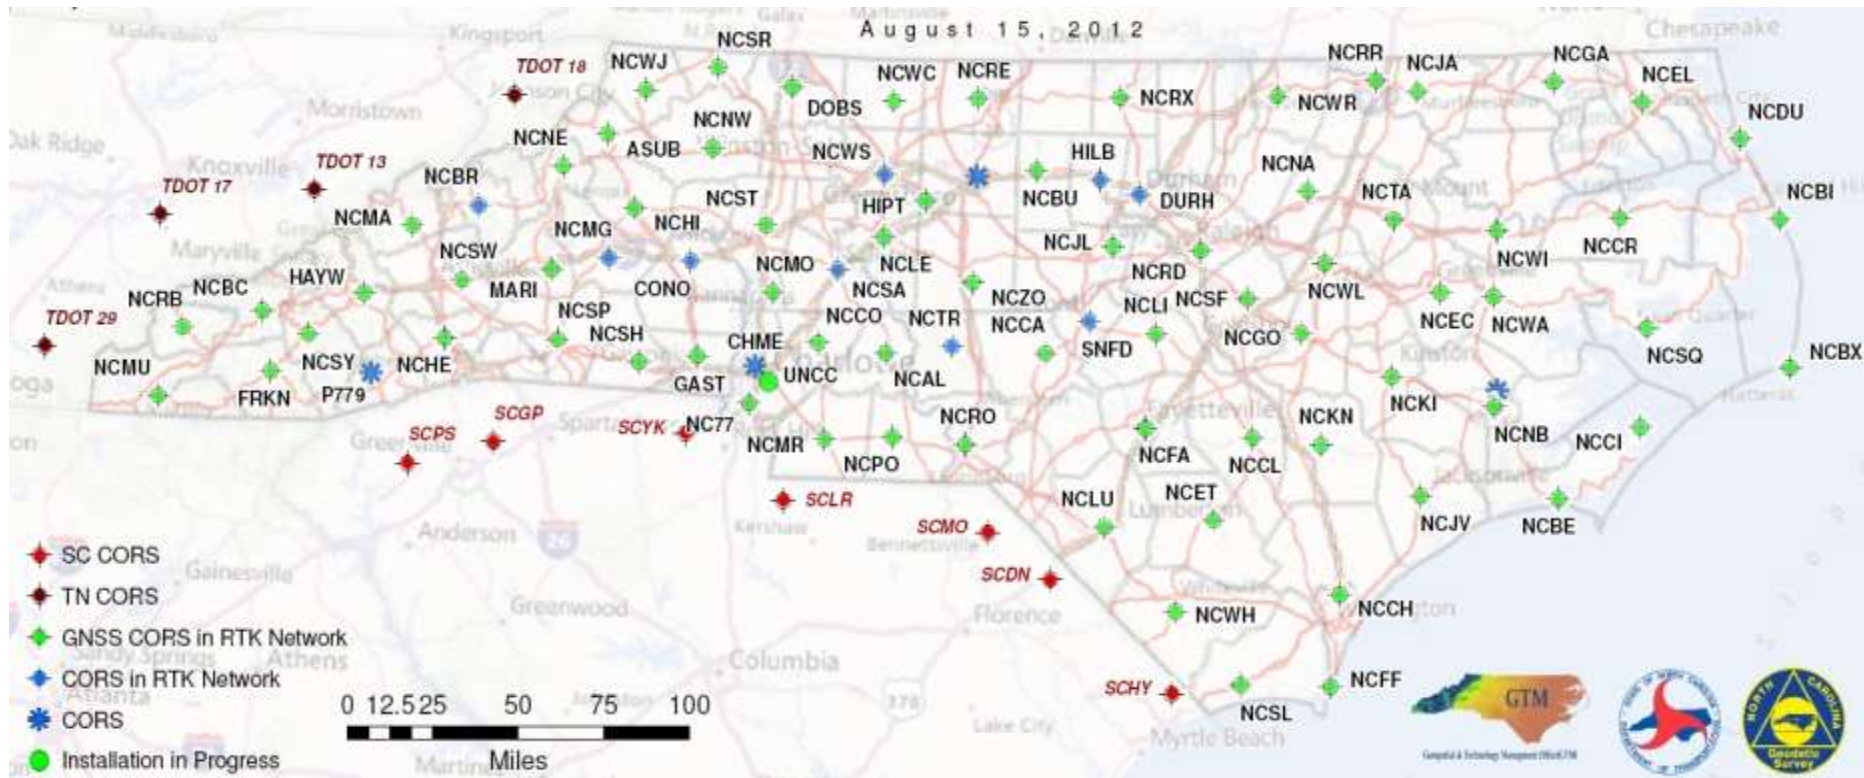

Although NGS has published the new multi-year CORS solution, they are still in the process of adjusting the passive marks to NAD 83(2011).

NGS is producing a new epoch (IGFD12) to be released in early 2012 to be used with NAD 83(2011). For more info

- Communication

- **Installation**

- Documentation
- Submittal to NGS

**Guidelines for New and Existing Continuously
Operating Reference Stations (CORS)**

National Geodetic Survey

National Ocean Survey, NOAA

Silver Spring, MD 20910

February 2006

CORS Hardware

- GNSS Receiver
 - Uninterruptible Power Supply (UPS)
 - Receiver location
 - Surge protection
 - Internet connection

CORS Hardware

- GNSS Antenna
 - Antenna Type
 - Type of leveling device
 - Antenna location
 - Monumentation/mounting
 - Lighting protection
 - Grounding
 - Antenna cable
 - Length/Type
 - Routing

Guidelines –Equipment Antennas

-L1 and L2

-Radomes NOT recommended

WHY: distort signal and not required in design of antenna

-Oriented to true North

WHY: apply antenna phase center values correctly

-Reference mark to antenna reference point (ARP)
constant

WHY: change antenna same coordinate

CORS Hardware (Leveling Devices)

The antenna phase centers are located somewhere around here

The user does not need to know these offsets. They are passed to the processing software through the antenna type

The antenna offsets are the distance between the phase centers and the ARP

If the user selects NONE as the antenna type, the offsets are set to 0.000 and the antenna phase center becomes the reference point

The Antenna Reference Point (ARP) is almost always located in the center of the bottom surface of the antenna.

Site Selection

- Clear view of the sky
 - Unobstructed view of the horizon 360 degrees
- No nearby signal reflectors
 - 0.5 m to 1.5 m above horizontal surfaces
- No nearby signal transmitters
 - 300 meters
- Stability
 - Thermal expansion
 - Wind loading
 - Soil expansion/contraction

Site Selection

- Reconnaissance
 - Visibility diagram
 - Photographs of proposed location
 - Measurements for monumenatation
 - Cable routing and type
 - Are drilled holes required in walls
 - Length of cable
 - Type of cable (LMR400 or LMR600)
 - Internet connection
 - Collect 24 hours of data

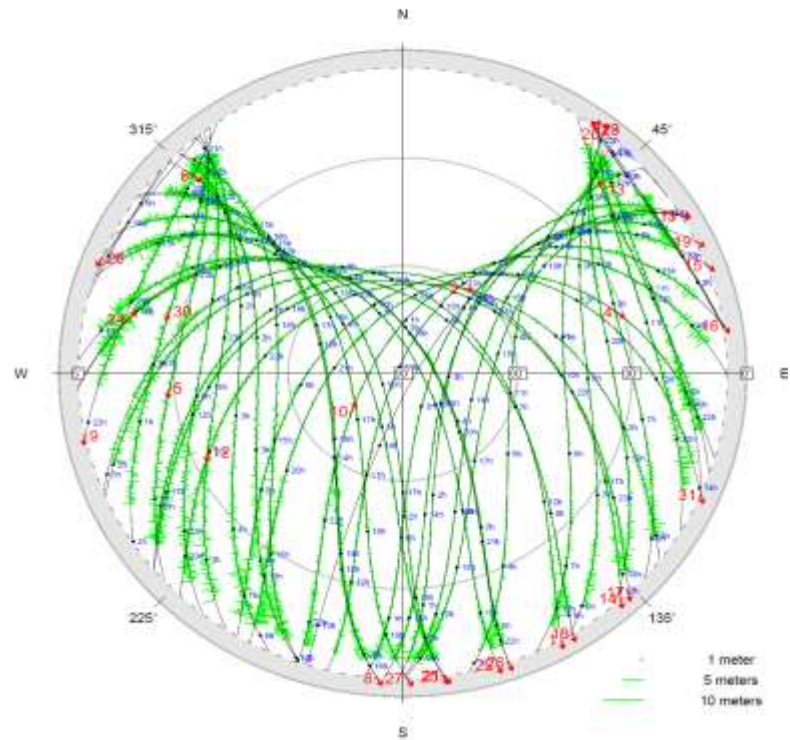

Site Selection

C1 Pseudorange Multipath at Sparta
Lat: 36.4977° Lon: -81.1147° Ell.Ht: 839.8 (m)
GPS Time: Start 2008/03/15 00:00:00 Stop 2008/03/15 23:59:31

C1 Pseudorange Multipath at New Bern CORS NBR6
Lat: 35.1750° Lon: -77.0498° Ell.Ht: -23.5 (m)
GPS Time: Start 2007/11/12 00:00:00 Stop 2007/11/12 23:59:31

Site Selection

- Building Mount
 - Brick/block or concrete building
 - Building must be 5 years or older
 - Chimney mount requires that chimney be filled with concrete
 - **No Metal Roofs!!!!**

Monumentation

- Ground Monumentation
 - Concrete
 - Metal

Monumentation

- Drilled-Braced
 - Most stable
 - Specialized equipment required for installation

Monumentation

- Building Mount
 - Rooftop attachment
 - Wall attachment

CORS Administration

- Latency
 - Bandwidth
 - Transmission medium
 - Router and switch performance
 - Firewall
 - Wireless network voice/data traffic

CORS Administration

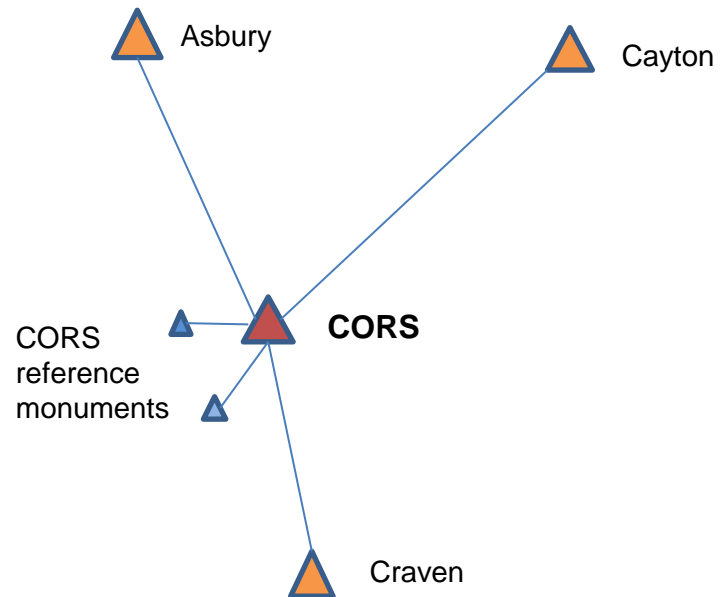

- Reference Station Datum
 - Benefits of using a reference datum that is consistent with the datum used by NGS
 - Easy to verify
 - Consistent with National CORS
 - Can use OPUS to position RTN CORS

CORS Administration

- Reference Station Datum
 - Ramifications of using a datum that differs from a datum utilized by NGS
 - OPUS and RTN solutions are based on different reference datums
 - OPUS can not be used to check RTN solutions
 - RTN can not be used to check OPUS solutions
 - Could create confusion with users

CORS Administration

- Connection to NSRS
 - Recommend local static surveys be performed to connect RTN CORS with local NSRS passive stations
 - NCGS uses NGS-58 to connect the CORS to the NSRS
 - Three (3) HARN monuments
 - Two (2) local CORS reference monuments

CORS Administration

- Connection to NAVD88
 - Connection completed before CORS antenna is installed or afterwards if offset leveling plate has been installed
- Field techniques
 - Geodetic leveling
 - Trigonometric leveling
 - NGS -58 survey

Geodetic Leveling to CORS ARP

Geodetic Leveling to CORS ARP

Figure 5. Leveling bar properly attached to rod. Bolt heads grip the rod's base plate.

User Friendly CORS

Version 3.6.2

This utility allows you to obtain a specific block of Global Positioning System (GPS) data for a continuously operating reference station (CORS) contained in the network of GPS sites managed by the National Geodetic Survey.

The GPS data will be in "receiver independent exchange" (RINEX) format, version 2.10.

A (very) brief history of NAD 83

- Original realization completed in 1986
 - Consisted (almost) entirely of classical (optical) observations
- “High Precision Geodetic Network” (HPGN) and “High Accuracy Reference Network” (HARN) realizations
 - Most done in 1990s, essentially state-by-state
 - Based on GNSS but classical stations included in adjustments
- National Re-Adjustment of 2007
 - NAD 83(CORS96) and (NSRS2007)
 - Simultaneous nationwide adjustment (GNSS only)
- ***New realization: NAD 83(2011) epoch 2010.00***

Introducing...

NAD 83(2011) epoch 2010.00

- **Multi-Year CORS Solution (MYCS)**
 - Reprocessed all CORS GPS data Jan 1994-Apr 2011
 - 2264 CORS & global stations
 - NAD 83 computed by *transformation* from IGS08
- **National Adjustment of 2011-- NAD83(2011)**
 - New adjustment of GNSS passive control
 - GNSS vectors tied (and constrained) to CORS NAD 83(2011) epoch 2010.00
 - Approximately 80,000 stations and 400,000 GNSS vectors
- **Realization SAME for CORS
and passive marks**
- **This is *NOT* a new datum! (still NAD 83)**

Why a new NAD 83 realization?

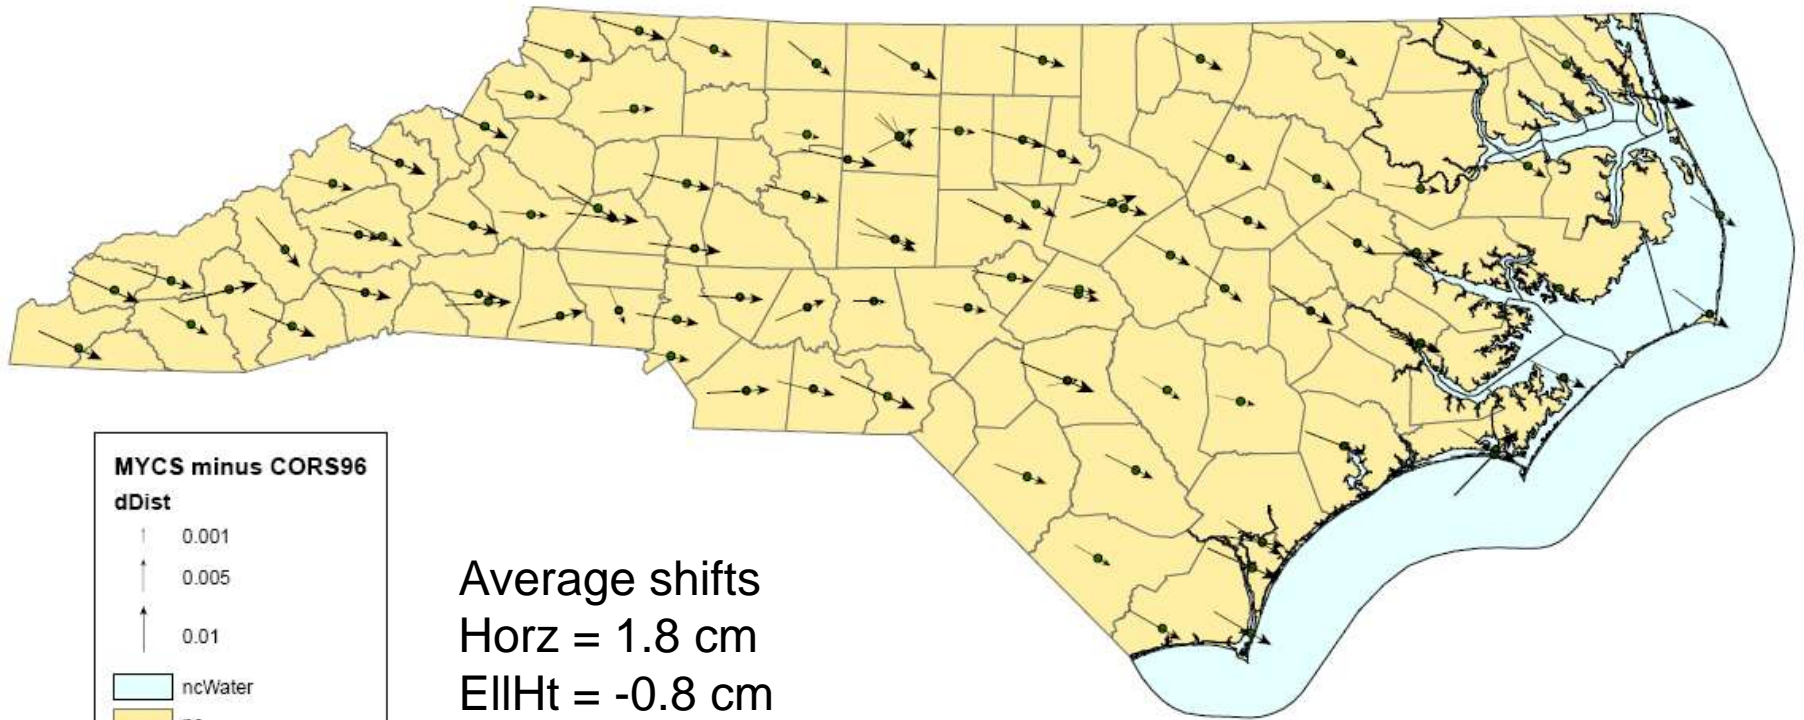

- Previous NAD 83(CORS96) needed many improvements
- NSRS improvements achieved with the MYCS include:
 - Consistent coordinates and velocities from combined solution
 - Aligned with most recent realization of global frame (IGS08)
 - **IGS08 epoch 2005.0** (previous aligned at epoch 1997.0)
 - **NAD 83 epoch 2010.0** (previous epochs of 2002.0 and 2003.0)
 - Major processing algorithm, modeling, metadata improvements
 - Absolute phase center antenna calibrations
- **Highly accurate *and* consistent CORS coordinates *and* velocities determined using *Best Available Methods***
 - *Needed because CORS network is foundation of NSRS*

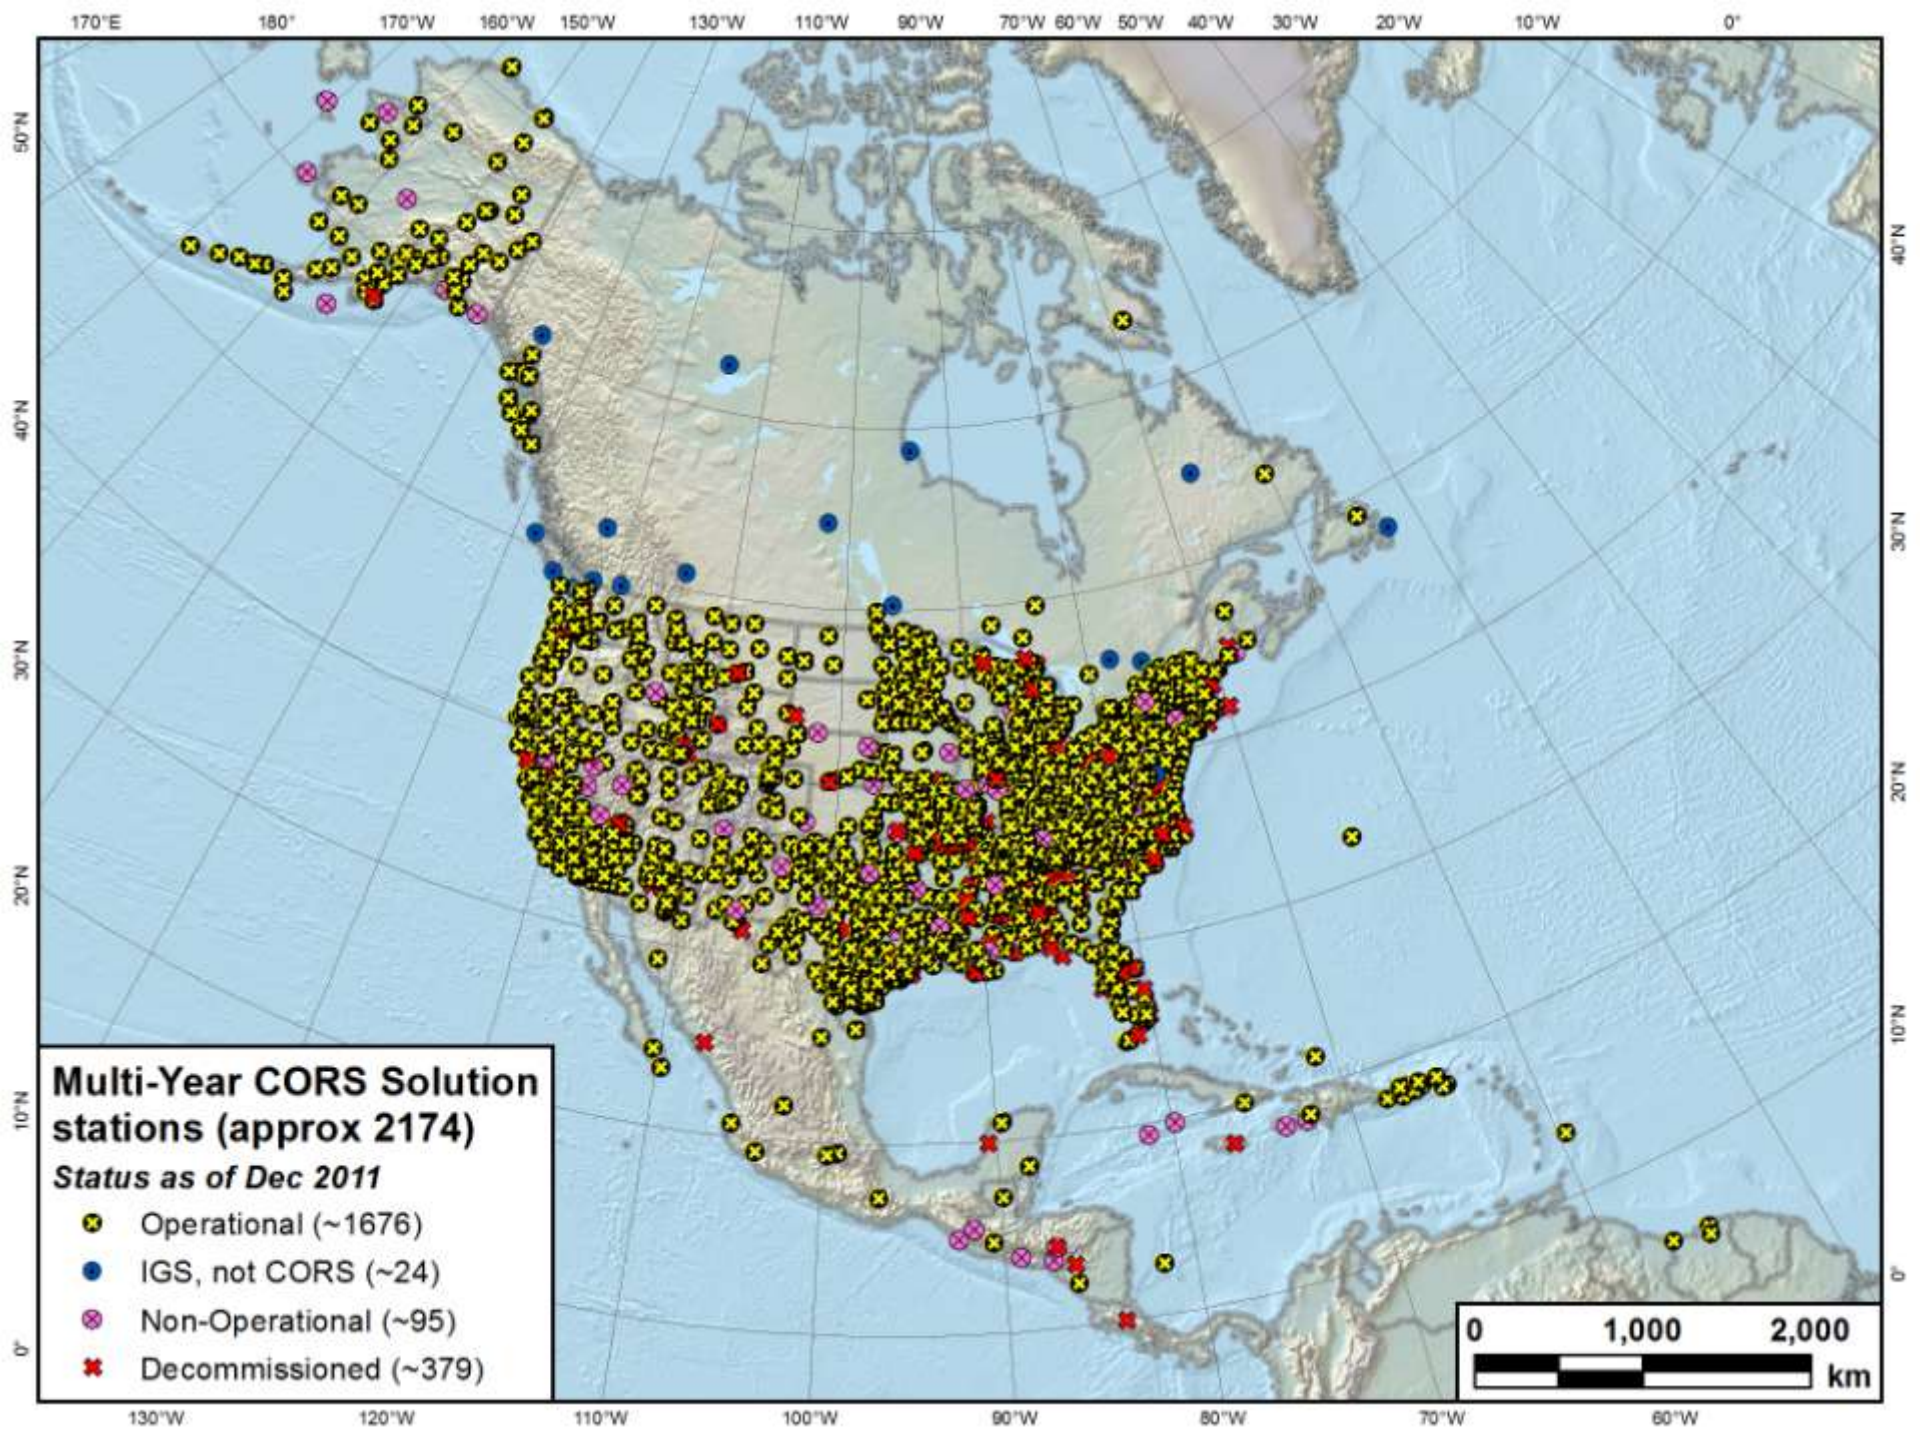

New Adjustment

- Name: **NAD83(2011) epoch 2010.**
- Released end of June 2012
 - Delayed due to technical difficulties and new data inclusion
- Based on re-computation of all CORS 1994 to present to align with world wide effort.
- NC Shifts (based on CORS shifts)
 - @ 1.8cm generally ESE
 - @-0.8cm (mainly due to computational change)

Shift From CORS96 to NAD83(2011)

MYCS minus CORS96 comparison

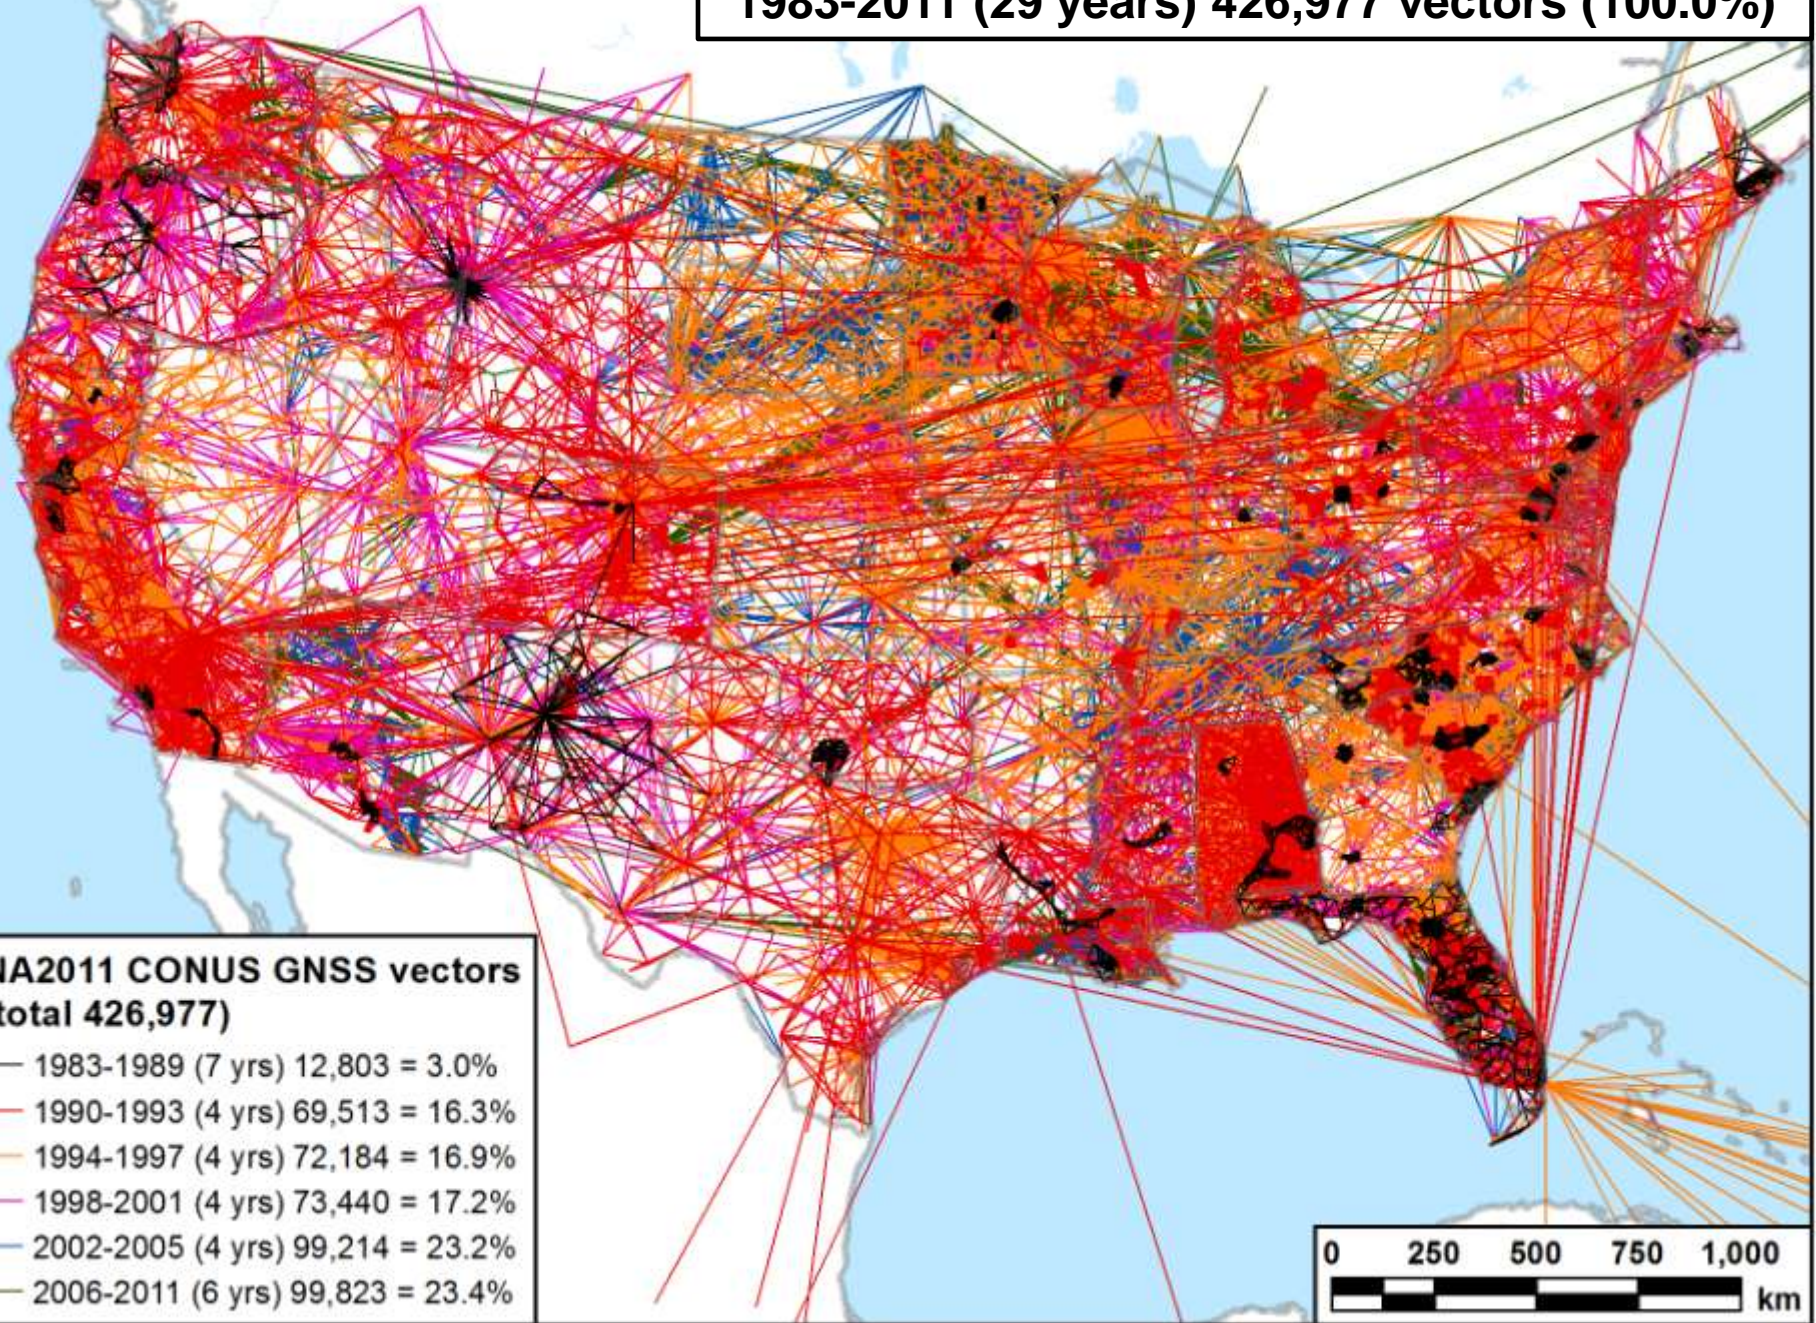

1983-2011 (29 years) 426,977 vectors (100.0%)

**NA2011 CONUS GNSS vectors
(total 426,977)**

- 1983-1989 (7 yrs) 12,803 = 3.0%
- 1990-1993 (4 yrs) 69,513 = 16.3%
- 1994-1997 (4 yrs) 72,184 = 16.9%
- 1998-2001 (4 yrs) 73,440 = 17.2%
- 2002-2005 (4 yrs) 99,214 = 23.2%
- 2006-2011 (6 yrs) 99,823 = 23.4%

1983-1993 (11 years) 82,316 vectors (19.3%)

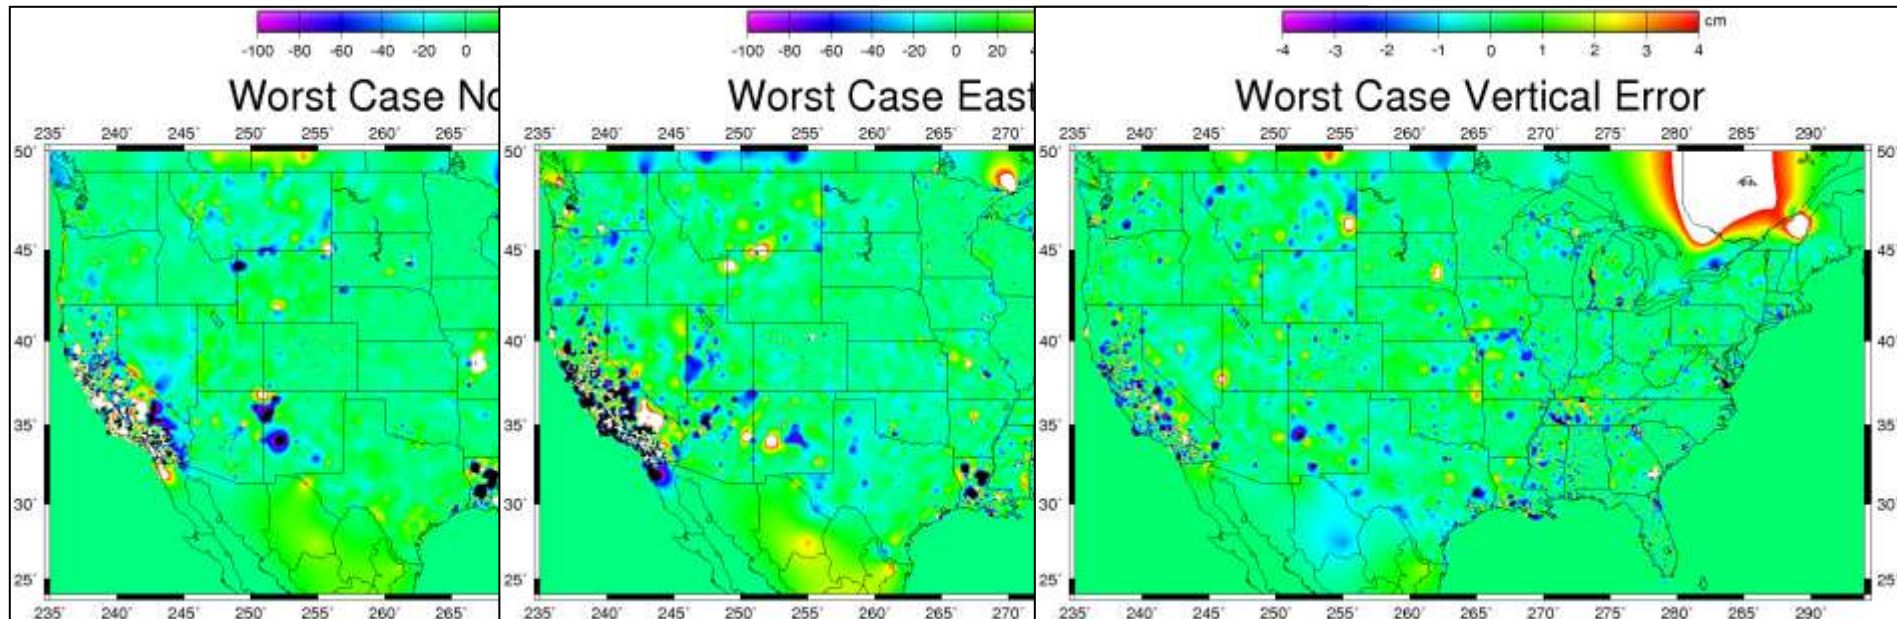

**NA2011 CONUS GNSS vectors
(total 426,977)**

- 1983-1989 (7 yrs) 12,803 = 3.0%
- 1990-1993 (4 yrs) 69,513 = 16.3%
- 1994-1997 (4 yrs) 72,184 = 16.9%
- 1998-2001 (4 yrs) 73,440 = 17.2%
- 2002-2005 (4 yrs) 99,214 = 23.2%
- 2006-2011 (6 yrs) 99,823 = 23.4%

Related Tasks, Products & Deliverables

- New NAD 83 coordinate transformations
 - NAD 83 “HARN” \leftrightarrow NAD 83(NSRS2007/CORS96)
 - Algorithm for this tool already created
 - NAD 83(NSRS2007/CORS96) \leftrightarrow NAD 83(2011)
 - Will build this tool as soon as NA2011 results available
 - Include output that indicates quality
 - Provided as (conservative) error grids and reports

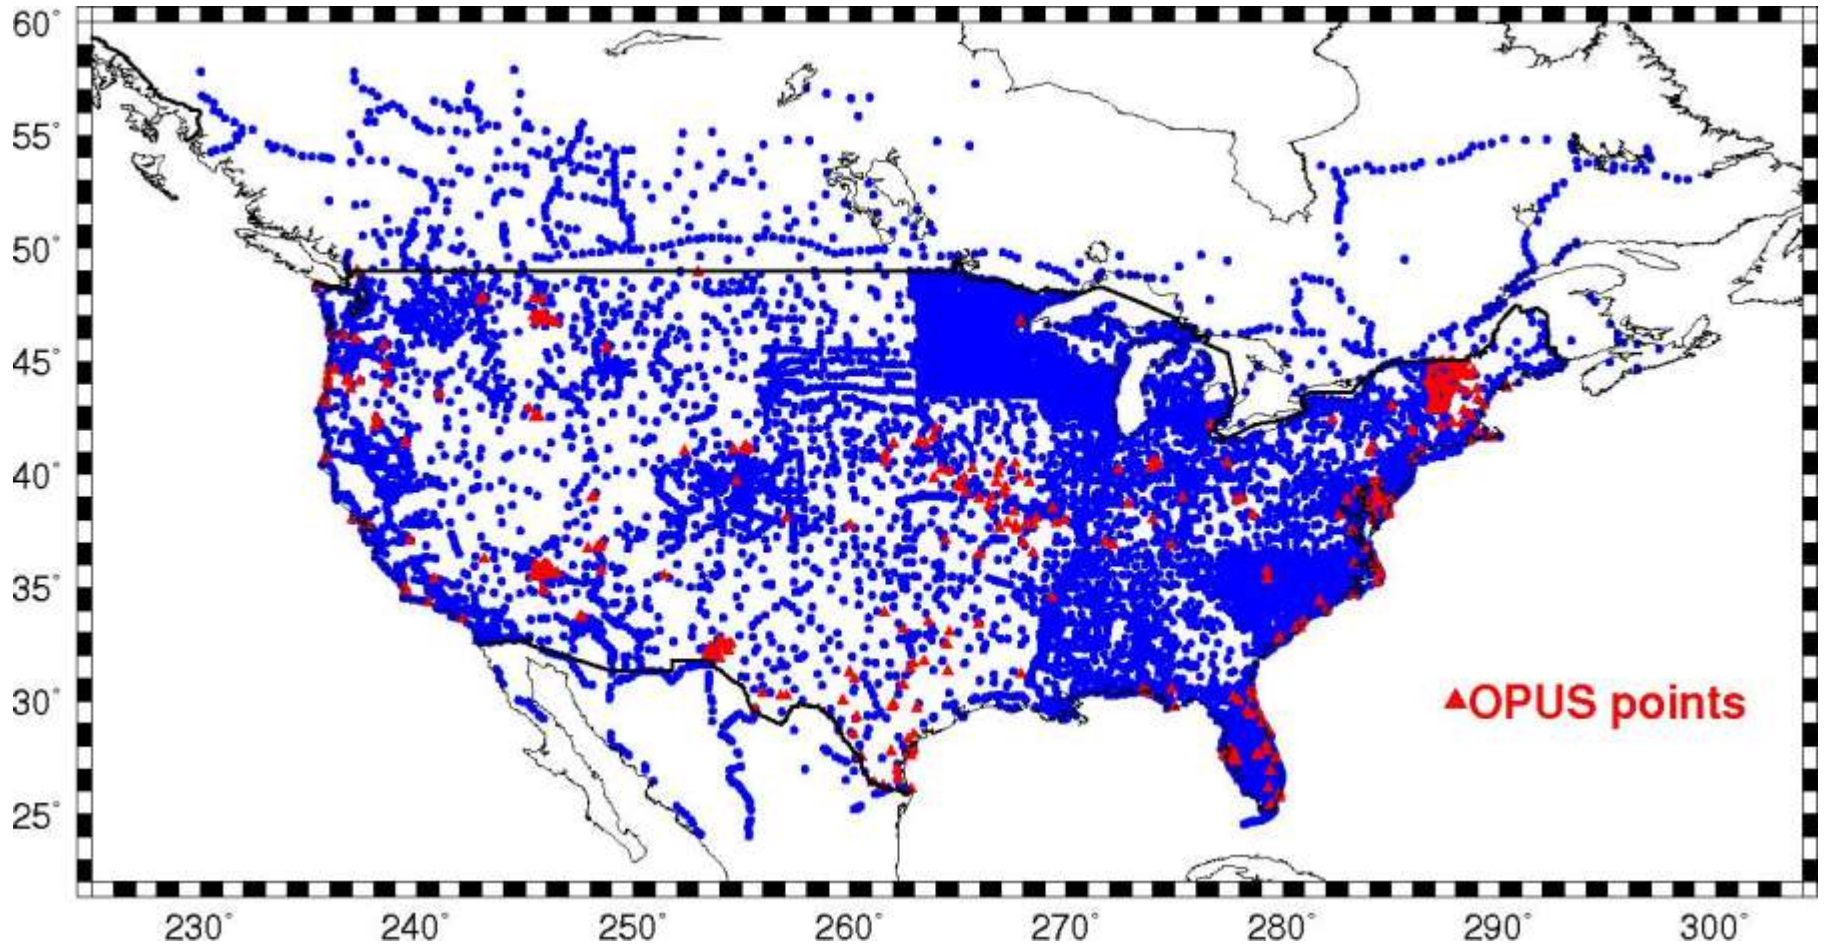

What about orthometric heights?

- NA2011 will yield:
 - NAD 83(2011/PA11/MA11) epoch 2010.00:
 - Latitude, longitude, and ellipsoid height
 - Network and “local” accuracies
- Orthometric heights (“elevations”) will ***NOT*** be determined in NA2011
 - Question: Will GPS-derived heights based on previous NAD 83 realizations and geoid models be consistent with those based on NAD 83(2011) and GEOID12?
 - i.e., is the ***relative*** change in ellipsoid heights and/or geoid heights significant (too large to ignore)?

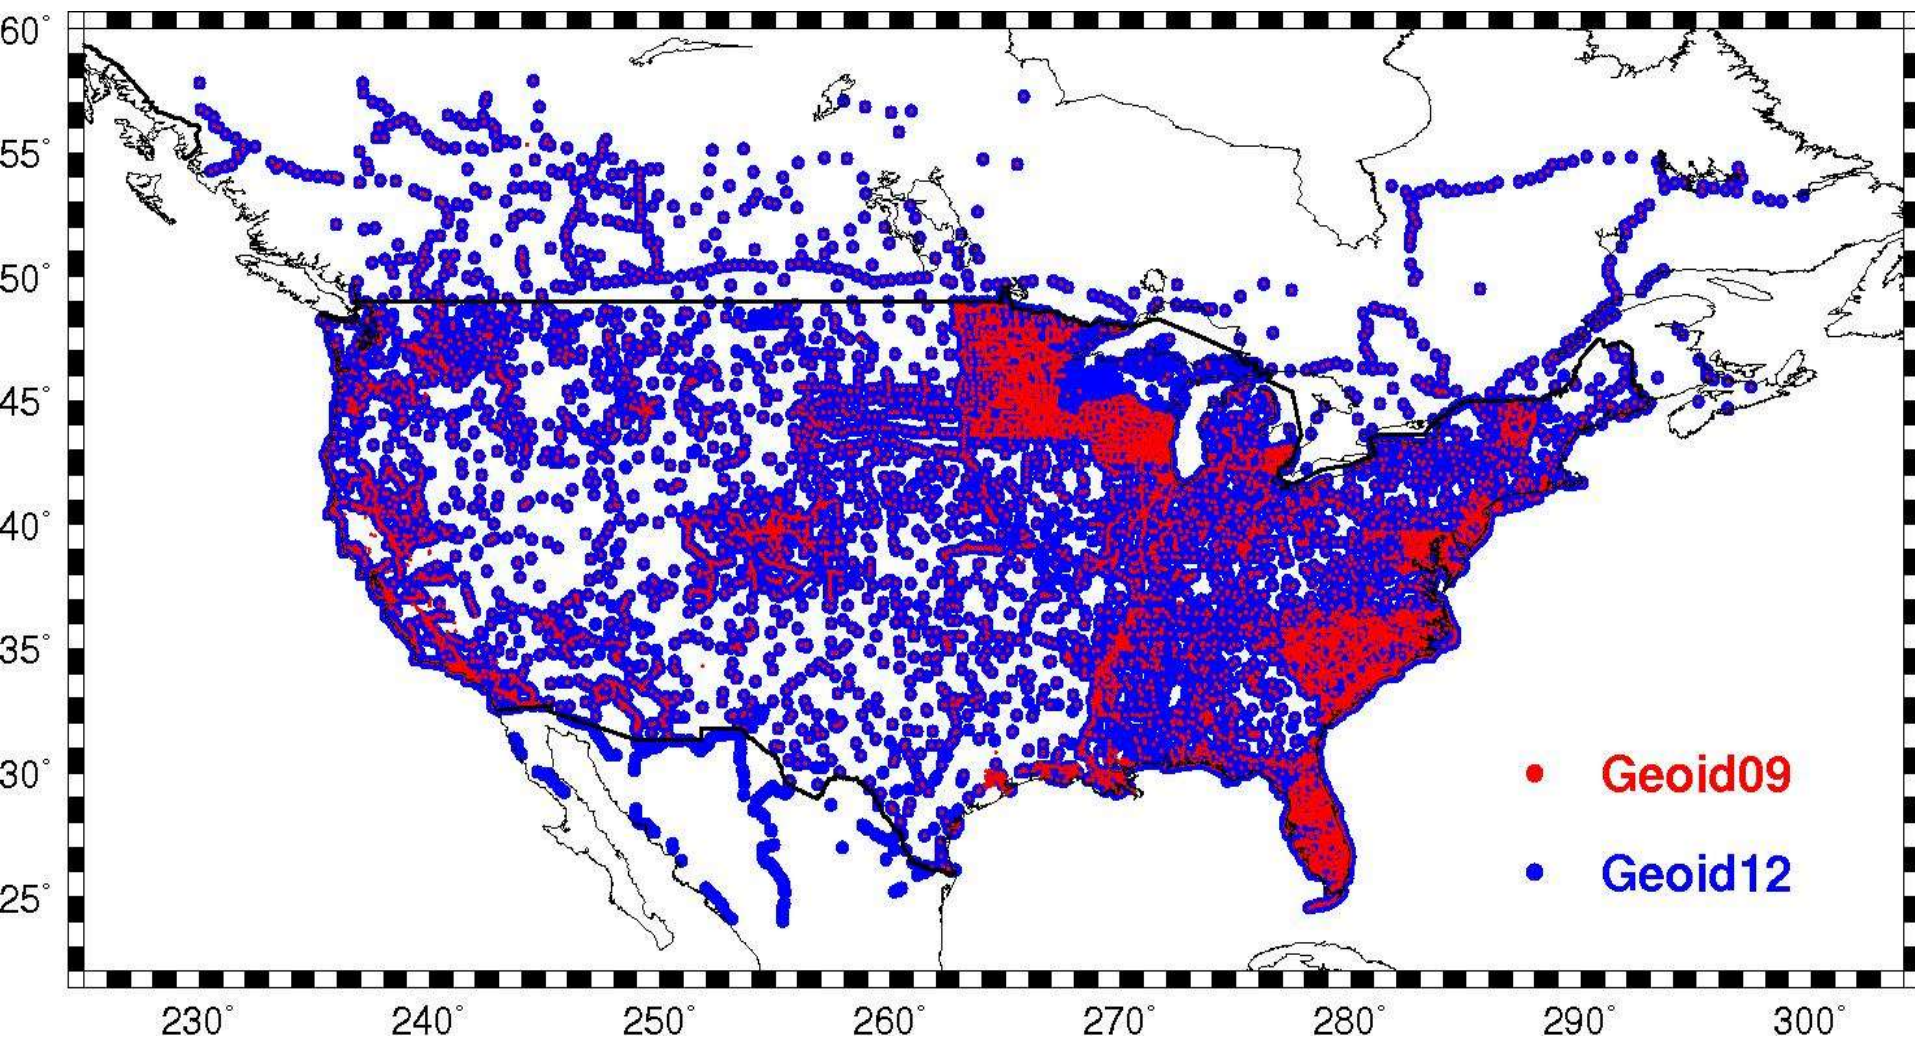

So...GEOID12

- New geoid model compatible with NAD83(2011) ellipsoid heights and NAVD88 bms.
- Released concurrently with NAD83(2011)
- No large slope changes in NC
- GEOID03 is NOT compatible **use Geoid12!!!**

Announcements

The NGS Database will briefly be unavailable on Saturday, September 22, 2012 from 4:00pm until 4:30pm Eastern time, in order to install additional storage space. This will disable retrievals of data via the web during the upgrade. Thank you for your understanding and cooperation. Please contact the [Database Administrator](#) for additional information about this event.

NOTICE: September 18, 2012

NGS requests your patience while we update the "bluebooking" process for GPS projects.

While we update the **adjust guidelines**, **submissions for all GPS projects are being postponed** until the new "bluebooking" processes are posted. A notice will be posted here when this is accomplished. Thank you for your cooperation.

NOTICE: NGS Update, September 11, 2012

GEOID12A Model Released

The National Geodetic Survey has released the **GEOID12A model**. Analysis of the underlying control data has been completed and a number of corrections were made to the original data used in making GEOID12. Changes impacted regions in the states of Alabama, Mississippi, Louisiana, Texas, Oklahoma, and Wisconsin. GEOID12A is now available for production and use.

Presentations

The screenshot shows a web browser window displaying the NCDENR website. The page title is "NCDENR - Presentations - Presentations - Windows Internet Explorer". The URL is "http://portal.ncdenr.org/web/0/guest/presentations". The browser's address bar shows "startnow" and "Search with Bing". The website header includes "NCDENR" and "Division of Energy, Mineral and Land Resources". The navigation menu includes "HOME", "LAND QUALITY", "GEOLOGICAL SURVEY", and "GEODETTIC SURVEY". The main content area is titled "Presentations" and shows a list of 19 files in a folder. The files are listed in a table with columns for Name, Size, Downloads, and Locked. The files include various presentations and documents related to geodesy and land resources.
